

## EFIT INSTRUCTIONS (HOW TO USE THE TOOL DURING AN EXAM)

Ensure that your environment meets the EFIT requirements. How to prepare personal computer for the EFIT, read APPENDIX.

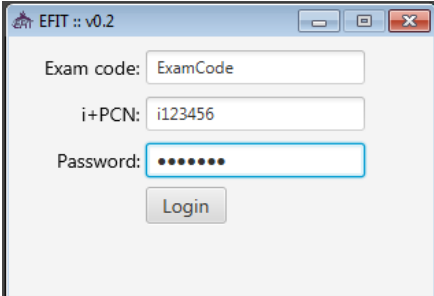

You can use **either** EFIT Wi-Fi (**preferable at Fontys**) or Cisco AnyConnect to connect to EFIT environment.

EFIT WIFI Method	Cisco AnyConnect method
<p>1a. Connect to Wi-Fi network <b>EFIT</b>, with password <b>912@whkp</b></p> <p>TIP: Uncheck “Connect automatically” option to avoid connection issues after an exam.</p> 	<p>1b. Start Cisco AnyConnect client:</p>  <p>2b. In the address box fill in: <b>https://efit.fhict.nl</b></p> <p>3b. In the next window, login with your iAccount credentials:</p> 

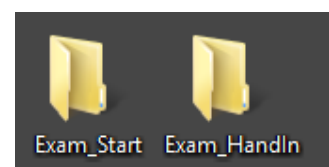

1. Now start the EFIT client. (If you do not have such, download it from <https://efit.fhict.nl>, after connecting to EFIT environment)

**IMPORTANT:** To run EFIT, you must use Java JRE or JDK 1.8 (version 8)

2. The following fields must be filled:
  - Exam code: Code given by examiner
  - i+PCN: iAccount
  - Password: same as in fhict.fontys.nl

3. If login is successful, you will see a new window with legal notes.
4. Please read it carefully before you agree with legal conditions. Click **Agree**, to star the exam.
5. If exam is started, click **Download** button to download exam assignment. The following folders will appear in your desktop folder (path: **C:\Users\<YourUserName>\Desktop**):
  - You will find exam assignment in **Exam\_Start** folder.
  - **IMPORTANT:** Make sure at the finish, everything that needs to be handed in must be in the **Exam\_HandIn** folder.

6. When you want to finish the exam, Click **Finish** and the system will upload whatever you have in the folder **Exam\_Handin**.

# APPENDIX

## PREREQUISITES FOR EFIT:

1. Java JRE or JDK 1.8 version
  - Check if you already have JRE installed in your system, by running EFIT\_\*.jar file. If the login window appears, it works. Most laptops have it already installed. Else, see next step.
  - Download and install Java JRE or JDK 1.8 (version 8) from:  
<https://www.java.com/en/download/>
2. Cisco AnyConnect VPN client

If you do not have it yet, download and install AnyConnect client.

  - Go to the <https://efit.fhict.nl>.
  - Login with your personal iAccount credentials.
  - Follow the AnyConnect wizard to complete its installation.

## POSSIBLE PROBLEMS AND SOLUTIONS

### Cisco AnyConnect: cannot modify VPN address

1. Ensure that Cisco AnyConnect Secure Mobility Client is closed completely (check in taskbar).
2. Delete “profile” folder from:

(For Windows)      c:\ProgramData\Cisco\Cisco AnyConnect Secure Mobility Client\

(For OSX and Linux) /opt/cisco/anyconnect/

3. Start Cisco AnyConnect Client and modify the VPN address.

### Cannot start EFIT application

- Ensure that Java JRE or JDK 1.8 is installed:  
  
(For Windows)      Go to: Control Panel->Java->General->About...  
  
(For OSX and Linux) Open terminal. Execute command: java -version.
- If java was not found or Java version is 7 or less, download and install Java JRE or JDK 1.8 (version 8) from  
<https://www.java.com/en/download/>

### Cannot see folders “Exam\_Start” and “Exam\_HandIn”

(For Windows) The default desktop path in your operating system is changed. Try to locate **Exam\_Start** and **Exam\_HandIn** folders in the default location: **C:\Users\<YourUserName>\Desktop**
